

POS Integration AV3.4 Emergency Release Notes

6/17/17

POS (point of sale) Integration is our one-of-a-kind technology that transfers data from many different systems into AutoVitals, in 30-120 seconds.

Fixes include the following issues, for point of sales Mitchell, MaxxTraxx, & M.Key:

- Missing specific ROs
 - When the RO was created but the vehicle also had an appointment date set in the future.
 - Some custom workflow steps in POS would cause ROs not to appear
- Google Calendar showing incorrect appointment date (showing the creation date instead of the schedule date)
- Delays caused by sudden floods of incoming data. Protection in place so performance is not affected.
- Customer Source selection in AutoVitals not sticking after manually choosing it on TVP.
- Duplicated ROs showing on TVP
- Appointment deleted in POS not also deleted in AutoVitals
